CZECH **LED LUMINAIRES**

UNA

MINIMALISM THAT LIGHTS UP SPACE.

BENEFITS

- **High luminous output**
- **Elegant and representative design**
- **Available in two optical versions and sizes**
- **Easy built-in installation**

HOW DOES IT WORK?

Modern recessed downlight luminaires are designed for installation in plasterboard and grid ceilings. They offer two optical options – **an opal diffuser (UNA OP)** for soft, uniform light and **an aluminium parabolic reflector (UNA PAR)** for more precise light control. Both optical versions are **available in two sizes.**

After installation, the luminaire provides powerful and evenly distributed light output, reliably illuminating **offices, shops, restaurants, and representative** spaces. It can be built-in into the ceiling or surface--mounted using a frame and will start working efficiently immediately.

MultiLumen (ML)

MultiColour (MC)

MultiLumen MultiColour (MLC)

APPLICATION

- Corridors and representative areas
- Offices, shops, and social spaces
- Bathrooms, toilets, and changing rooms
- Installation into plasterboard and grid ceilings (optional surface mounting using a frame)

OTHER ADVANTAGES OF UNA LUMINAIRES

- IP54 and IP44 protection for increased luminaire durability
- Protection class II for safe operation
- Maximum ambient temperature up to 35 °C
- Long lifetime of 50,000 h / L80B10
- High-quality optics: opal PMMA diffuser and polished aluminium reflector
- DALI version enables constant light output throughout the lifetime (CLO)
- Standard configuration: CRI > 80, 4000 K
- Also available in dimmable or emergency versions
